Pellets deliver consistent, healthy levels of hormone for 3-6 months. It is the fluctuations of hormone levels that cause many of the unwanted side effects of hormone replacement therapy. The use of Pellets avoids fluctuations of hormone levels seen with every other method of delivery. Pellets have been shown to be superior in relief of menopausal symptoms, maintenance of bone density, restoration of sleep patterns, improved sex drive, sexual response and mental performance. Even patients who have failed other types of hormone replacement therapy have a very high rate of success with hormone replacement pellets. In addition, there is no other method of hormone delivery that is as convenient. Most importantly, Pro-Pell Pellets eliminate the dangers associated with transfer of hormones to your loved ones.

## The Science

Synthetic conjugated Equine hormone replacement, such as Premarin and Prempro, and other similar products have demonstrated a significant increase in harmful side effects

- 41% higher rates of stroke
